

# YESDVD<sup>®</sup>

on a  
Mac<sup>®</sup>

## To Play a YesDVD on a Mac:

YesDVDs can be played and watched on most Mac computers with a DVD drive and DVD playback software.

**What you need:** Mac OS X system software and a DVD drive.

1. Insert your YesDVD into your Mac's DVD drive and it should open up automatically.  
**or**  
Open the **DVD Player** application located in the application folder of your hard drive directory
2. Click on the "File" menu and choose Open DVD Media. Select your DVD title.

If for any reason your YesDVD still down not play, visit your nearest Apple Dealer and sign into the Genius Bar for technical assistance. You may have a problem with your Macs DVD drive or settings.

## To Edit a Movie Clip from your YesDVD:

**Digital Scrapbook** will not work on a Mac...but savvy and experienced Mac users can still access movie clips by using third-party Mac applications. These applications convert DVD contents into a file format that can be edited using iMovie or other movie editing software.

## Which version of Mac OS X do you have?

### Mac OS X 10.5 or higher

1. Download the third party Mac OS X application **Handbrake** free at: [www.handbrake.fr](http://www.handbrake.fr)
2. In order to utilize Handbrake you will also have to download **VLC Media Player** from: [www.videolan.org](http://www.videolan.org)
  - Handbrake can then be used to convert your YesDVD's content into an MPEG-4 file, which you can then edit using iMovie or other movie editing software. Detailed instructions can be found at [www.handbrake.fr](http://www.handbrake.fr).
3. Import the MPEG-4 video file into iMovie or your movie editing software of choice.

### Older version of the Mac OS X (10.4 or lower) (Recommended for advanced users only)

1. Download the the third-party Mac OS X application **MPEG Streamclip** free at: [www.squared5.com](http://www.squared5.com)
2. You will then be required to purchase the \$20 Apple QuickTime MPEG-2 Playback Component at: [www.apple.com](http://www.apple.com) or <http://store.apple.com/us/product/D2187Z/A>
3. MPEG Streamclip will export your VOB files into a movie format that your movie editing software supports.
4. Import your video file into your movie editing application, such as iMovie.
